October 13, 2026

Dr. Xinchang “Cathy” Li
Incoming Assistant Professor
Department of Civil and Environmental Engineering
University of Wisconsin–Madison, Wisconsin, USA

**Application for PhD Opportunity in Climate and AI - Fall 2027**
Dear Dr. Li

I am applying for the advertised PhD opportunity in your research group at the University of Wisconsin–Madison, with a preferred start in Fall 2027. I hold an MSc in Atmospheric and Oceanic Sciences from McGill University and a First-Class BSc in Meteorology and Climate Science from Kwame Nkrumah University of Science and Technology in Ghana. Your group’s integration of Earth-system modelling, climate research and artificial intelligence aligns with the direction I want to pursue in doctoral study.

During my MSc, I investigated historical and projected sea-ice conditions along the Nunatsiavut coast using climate-model simulations, reanalysis and Canadian Ice Service observations. This work involved processing large environmental datasets, evaluating model performance and interpreting changes in climate conditions relevant to northern communities. I also developed and validated a degree-day model for sea-ice onset and melt timing. These experiences strengthened my ability to connect physical processes with quantitative analysis and to assess the limitations of models and observations.

My undergraduate research examined how temperature influences the lifespan and vectorial capacity of malaria vectors across Ghana’s agro-ecological zones. Although the application differed from my MSc research, both projects required linking climate conditions to consequences for people. This connection motivates my pursuit of research that advances understanding of environmental change while supporting practical adaptation decisions.

I use Python for scientific computing, statistical analysis, geospatial analysis and climate-model evaluation. My subsequent work evaluating AI systems on scientific tasks has further motivated me to develop expertise in machine learning for weather and climate. I would bring a foundation in atmospheric science and environmental-data analysis while building the advanced AI and modelling skills needed for doctoral research.

Your planned work on urban climate, human–Earth-system interactions and climate-sensitive energy resilience particularly appeals to me. I want to understand how climate hazards interact with human activity and infrastructure, and how physically informed, interpretable data-science methods can improve predictions and assessments. I would welcome the opportunity to develop this direction within your interdisciplinary group.

My experience as a Teaching and Research Assistant in KNUST’s Department of Physics and as a Teaching Assistant at McGill has also strengthened my communication and collaboration skills. My long-term goal is to become a university faculty member conducting climate and environmental-data research while teaching and mentoring students. Thank you for considering my application. I would welcome an opportunity to discuss how my background and research goals could contribute to your group.

Sincerely,
Thomas Amo Kyeimiah

## Profile

Climate and data scientist with an MSc in Atmospheric and Oceanic Sciences from McGill University and a First-Class BSc in Meteorology and Climate Science from KNUST. Experienced in analyzing large observational, reanalysis, and model datasets using computational, statistical, and geospatial methods. Skilled in Python, machine learning, scientific computing, statistical analysis, geospatial analysis, and model evaluation. Interested in integrating data science, machine learning, and computational methods with climate and Earth-system science to investigate weather, climate, environmental variability, and related scientific problems.

## Education

- Master of Science in Atmospheric and Oceanic Sciences **August 2022 – August 2024**
  McGill University, Montreal, Quebec, Canada
  *GPA: 3.38/4.00*
- Bachelor of Science in Meteorology and Climate Science **September 2017 – September 2021**
  (***First Class Honours***) Kwame Nkrumah University of Science and Technology (KNUST), Kumasi, Ghana
  *CWA: 77.04 (WES GPA 3.90/4.00)*

## Research Experience

- ***Graduate Researcher,*** **McGill University** **August 2022 – August 2024**
  *Thesis: Projection of Sea Ice Conditions in Nunatsiavut (Labrador)*
  - Analyzed CESM-HR climate-model simulations, ERA5 reanalysis, and Canadian Ice Service observational datasets to assess historical and projected sea-ice conditions.
  - Developed reproducible Python workflows to process, integrate, and compare large climate-model and observational datasets.
  - Evaluated model performance using bias analysis, statistical validation, climatologies, anomalies, and time-series analysis.
  - Developed and validated a degree-day model for estimating sea-ice onset and melt timing.
  - Investigated projected changes in seasonal sea-ice conditions and their implications for northern communities.
  - ***Supervisor:*** Prof. Bruno Tremblay
  - ***Thesis:*** https://escholarship.mcgill.ca/concern/theses/kw52jf57r

- ***Undergraduate Researcher,*** **KNUST** **January 2021 – September 2021**
  *Thesis: Impact of Climate Change on Vectorial Capacity of Malaria Vectors Over the Agro-Ecological Zones*
  - Analyzed temperature observations across Ghana's agro-ecological zones to examine climate-related differences in malaria transmission potential.
  - Applied statistical and disease-transmission models to estimate mosquito lifespan and vectorial capacity under varying temperature conditions.
  - Compared spatial and temporal patterns across ecological zones and produced research visualizations to communicate the results.
  - Contributed to research that subsequently resulted in a peer-reviewed publication.
  - ***Supervisor:*** Dr. Edmund Ilimoan Yamba

## Work and Teaching Experience

- ***Senior Reviewer, AI STEM Specialist and AI Trainer, Handshake AI*** | *Remote* **March 2026 – Present**
  - Review AI-generated scientific analyses, Python code, and data visualizations for technical accuracy, reproducibility, and compliance with project requirements.

- Evaluate complex tasks involving climate science, hydrology, geospatial analysis, statistics, and machine learning.
- Identify methodological, computational, and scientific-reasoning errors and provide detailed feedback to improve model outputs.
- Assess scientific-computing workflows involving large and multidimensional datasets across research domains.
- Support the development of reliable AI systems for scientific and technical applications.

- ***AI Trainer and Annotator, RWS Group*** | *Remote Contract* **September 2025 – February 2026**
  - Evaluated and annotated AI-generated responses according to project-specific quality and accuracy guidelines.
  - Identified factual, reasoning, relevance, and instruction-following issues in model outputs.
  - Provided structured feedback and corrections to support improvements in AI model performance and response quality.

- ***Research Assistant*, Environment and Climate Change Canada** **June 2024 – August 2024**
  - Evaluated CMIP6 simulations of sea-ice concentration and thickness against observational datasets.
  - Processed and analyzed large, multidimensional climate datasets using Python, Xarray, Pandas, and Cartopy.
  - Applied statistical metrics and model–observation comparisons to quantify biases and assess climate-model performance.
  - Developed reproducible data-processing and visualization workflows to support climate diagnostics and model evaluation.

- ***Teaching Assistant*, Department of Atmos. and Oceanic Sci., McGill University** **August 2023 – May 2024**
  - Supported ATOC 182: Introduction to Oceanic Sciences and ATOC 184: Science of Storms.
  - Led quantitative review sessions and explained atmospheric and oceanic concepts to undergraduate students.
  - Graded assignments and examinations, held office hours, and provided individualized academic support.
  - Guided students in critically interpreting scientific literature and communicating technical concepts.

- ***Teaching and Research Assistant*, Department of Physics, KNUST** **October 2021 – September 2022**
  - Assisted in courses: Climate Change: Science, Policy and management, Scientific Computing (Python/Fortran), Experimental Physics, Biometeorology and Human Health.
  - Taught Python and Fortran programming for scientific data analysis, visualization, and meteorological applications.
  - Delivered practical workshops on scientific Python libraries, Linux-based computing, and reproducible research workflows.
  - Assisted faculty with research activities, laboratory instruction, student supervision, and assessment.

- ***Meteorology Intern*, Ghana Meteorological Agency (GMet), Accra** **June 2019 – July 2019**
  - Collected, quality-checked, and analyzed meteorological observations, including rainfall and wind data.
  - Examined rainfall variability and trends across weekly, seasonal, and decadal timescales.
  - Supported operational weather forecasting using surface observations, radar and satellite products, and numerical weather prediction guidance.
  - Produced maps and visualizations using ArcGIS and R to support forecast interpretation and communication.

## Skills

- ***Programming and Scientific Computing:*** Python, R, Fortran, Bash, Linux, Git
- ***Data Analysis and Machine Learning***: Xarray, Pandas, NumPy, SciPy, scikit-learn, statsmodels
- ***Climate and Geospatial Analysis***: NetCDF, CDO, NCL, ArcGIS, QGIS, GeoPandas, Cartopy
- ***Climate Data and Models:*** ERA5, CMIP6, CESM, WRF, satellite and in-situ observations
- ***Methods:*** Statistical modeling, predictive modeling, model evaluation, bias analysis, time-series analysis, geospatial analysis, data visualization

- ***Research Tools:*** LaTeX, Jupyter, Microsoft Office, ParaView, Power BI

## Publications

- Yamba, E., Badu, K., **Kyeimiah, T. A.,** et al. (2025). *Warming Temperatures Reduce Lifespan and Vectorial Capacity of Anopheles Mosquitoes in Ghana.* **Infectious Disease Modelling**. *https://doi.org/10.1016/j.idm.2025.12.011*

## Selected Research and Computational Projects

- ***Sea Ice Projection in Nunatsiavut*** – *Repo* | *MSc thesis project; climatology, anomaly mapping, time series analysis*
- ***CMIP6 Sea Ice Assessment*** – *Repo* | *Bias metrics & model evaluation*
- ***Climate Diagnostics Toolkit*** – *Repo* | *Processing NSIDC passive microwave data*
- ***Southern Ocean Circulation (MITgcm)*** – *Repo* | *Ocean thermocline simulations under wind forcing*
- ***SIR Malaria Disease Modeling*** – *Repo* | *Undergraduate project on disease transmission dynamics*

## Awards and Honours

- **Fully Funded Participant**, School and Workshop on Polar Climates | ICTP, Trieste, Italy **July – August 2024**
- **Graduate Excellence Award** | McGill University **August 2022 – August 2024**
- **Anti-Black Racism Initiative Graduate Excellence Recruitment Award** | McGill Univ. **August 2022 – April 2023**
- **Winner, Final-Year Research Poster Presentation** | KNUST **September 2021**

## Conferences, Training and Workshops

- **Participant and Poster Presenter** **July 2024 – August 2024**
  School and Workshop on Polar Climates: Theoretical, Observational and Modelling Advances by International Centre for Theoretical Physics, ICTP, Trieste, Italy
  - *Presented MSc research on projected sea-ice conditions in Nunatsiavut.*
  - *Completed a research project examining Arctic precipitation responses to sea-ice loss and doubled atmospheric $CO_2$ using CESM-WACCM4 experiments, supervised by Professor Paul Kushner, University of Toronto.*
- **Poster and Oral Presenter** **February 2024**
  Nunatsiavut Research Centre, Nain, Labrador, NL, Canada
  - Presented research on observed and projected changes in sea-ice conditions in Nunatsiavut.
  - Discussed the retrieval and digitization of archival sea-ice records used to support MSc research and model evaluation.
- **Participant** **October 2023 – November 2023**
  Data Science with Python by Computational and Data Systems Initiative (CDSI), Faculty of Science, McGill University.
- **Participant (Virtual)** **May 2023**
  *Revisiting the agro-climatic zones of Ghana: a re-classification in conformity with climate change and variability*.
- **Poster Presenter** **September 2021**
  KNUST Final-Year Research Poster Presentation, Kumasi, Ghana
  - *Presented Impact of Climate Change on the Vectorial Capacity of Malaria Vectors Over the Agro-Ecological Zones.*
  - *Received the award for Best Final-Year Research Poster Presentation.*

### SUMMARY

| | | |
|---|---|---|
| Total Graduate Semester Credit: | 45.0 | GPA: 3.38 |
| Total Undergraduate Semester Credit: | 156.0 | GPA: 3.90 |

## WES EVALUATION TERMS

**Evaluation Scope**: World Education Services (WES) evaluates only formal educational credentials. WES does not evaluate professional experience. WES evaluations are based upon the best information and resources available to professional evaluators. WES evaluations are offered as non-binding advisory opinions.

**Accredited Institution:** The status of a nationally recognized institution in another country is comparable to that of a regionally accredited institution in the United States.

**Credential Authentication:** Evaluations prepared by WES specify the manner in which each document was authenticated. The method used depends on what is appropriate for the specific country and level of education. WES authenticates academic records by one of the following methods.

- by requiring that official transcripts be sent to WES directly by the institutions or examination bodies that issued them;
  OR
- by requiring that official transcripts be authenticated by the relevant government authority (e.g. Ministry of Education) before being sent directly to WES;
  OR
- by verifying documents submitted by individuals by sending them back to the institutions/examination bodies that issued them and obtaining a written confirmation of their authenticity.

**Detailed country-by-country document requirements** can be viewed at www.wes.org/required/index.asp

**Grades/ Quality Points:** WES uses an alphabetic system to identify grades. The standard WES conversion of letter grades into a numerical scale/quality points is as follows: A = 4.00; A-=3.67; B+ = 3.33; B = 3.00; B- = 2.67; C+ = 2.33; C = 2.00; C- = 1.67; D+ = 1.33; D = 1.00; F = 0; F*=(see below); R*=(see below)

- "F*" indicates a course that was failed initially, but passed on a subsequent attempt. It is not included in the GPA calculation.
- "R*" indicates a course that was passed initially, but was retaken for grade improvement. It is not included in the GPA calculation.
- "Pass" is not included in the Cumulative Grade Point Average. For study completed at the undergraduate level, it corresponds to at least a "C" in the United States. For graduate and professional study, "Pass" corresponds to at least a "B".

**Grade Point Average (GPA)** is calculated by multiplying the credits per course by the quality points for the grade for that course, repeating this procedure for each course, totaling the credit hour quality points thus obtained, and dividing by the total number of credits.

**Course Level Designation:** The designation "U" (upper) or "L" (lower) for a course at the undergraduate level is an indication of its level.

**Credit Recognition and Transfer:** The course-by-course analysis represents a breakdown of post-secondary study in terms of U.S. semester credits and grade equivalents. The number of credits accepted for transfer to a degree program or towards a professional license in the United States may vary from those listed in this report in accordance with the policies of the receiving educational institution or professional agency.

**Evaluations for Professional Licensing/Certification:** WES does not assess professional aptitude or experience. Only authorities qualified in the profession can determine whether an individual meets requirements for licensing or to practice the profession in the United States.

McGILL UNIVERSITY

MONTREAL

TO ALL TO WHOM THESE PRESENTS MAY COME, GREETING:

WE, THE GOVERNORS, PRINCIPAL, AND FELLOWS OF McGILL UNIVERSITY TESTIFY THAT

# *Thomas Amo Kyeimiah*

HAVING DILIGENTLY COMPLETED THE REQUIRED COURSE OF STUDY AND PERFORMED THE PRESCRIBED EXERCISES HAS BEEN ADMITTED TO THE DEGREE OF

# MASTER OF SCIENCE

WITH ALL THE HONOURS, PRIVILEGES, AND PREROGATIVES PERTAINING TO THAT DEGREE, IN WITNESS WHEREOF WE HAVE AFFIXED OUR SIGNATURES AND HAVE CAUSED THE SEAL OF THE UNIVERSITY TO BE ATTACHED HERETO. GIVEN IN CONVOCATION THIS 2ND DAY OF DECEMBER IN THE YEAR 2024.

DEAN

REGISTRAR

CHANCELLOR

PRESIDENT

# McGill University Official Document Cover Page

McGill University official documents are issued directly through MyCreds™ which is owned by the Association of Registrars of the Universities and Colleges of Canada (ARUCC) and powered by Digitary, a trusted international verified digital credential platform. MyCreds™ ensures document authenticity. When transcripts, credentials, and any other documents are issued through MyCreds™, they are verifiable, secure, and include a cryptographic signature.

**If you have received a notification of this document from noreply@mycreds.ca and a link to access it through MyCreds™, you are viewing a certified official document that you can trust. A document routed to you as an attachment from an individual personal email is not official and may not reflect the most recent version.**

When viewed in PDF format in Adobe 9.0 or later, this document has a number of security features described below. These security features do not apply to a printed copy. Under no circumstance should a printed copy be relied upon as it could be subject to tampering. This document is shared as a single-use transaction between the learner and the recipient and downloads are for record keeping purposes only. Forwarding or reproducing this document will render the document not valid.

**Security information**
To verify the authenticity of the digital document, make sure you are accessing it online via a link to the document on MyCreds™. The link will start with https://learner.mycreds.ca.

When viewed in PDF format in Adobe 9.0 (or later), the digital signature of the document should be interpreted as follows:

The blue-ribbon symbol signifies that the contents of the document have not been altered after it was downloaded. It does not signify its currency (it may have been revoked or replaced by the institution or organization with a more up to date document). If the document does not display a valid certification and signature message, reject this document immediately.

This symbol with a red cross signifies that the issued document is invalid. An invalid digital certificate display means either the digital signature is not authentic, or the document has been altered. A document with an invalid digital signature display should be rejected.

This symbol signifies that the Author is Unknown. Author Unknown can have two possible meanings: The document is a self-signed document or has been issued by an unknown or untrusted authority and therefore has not been trusted. If you receive this message, make sure you are properly connected to the internet. If you have a connection and you still cannot validate the digital signature on-line, reject this document.

This symbol indicates that Adobe needs to validate the signatures. You will need to follow the instructions to validate the signature. Should the signature validate successfully, you will be presented with the blue-ribbon symbol above. If it cannot validate the signature, the red cross will be presented.

This document is available for viewing until the expiry date set by the Learner. If your access has expired, you will need to contact the Learner to request a new share of the document. MyCreds™ cannot reissue documents.

For details about McGill University grading scales, academic standing and continuance policies, please refer to the eCalendar.

For more information regarding electronic documents, see Recipient FAQs (employers, institutions, security and legal validity, verifying documents) https://mycreds.ca/verifiers/#verify-faq

## GRADING – Effective September 1980

| Dentistry (effective 1987) | Graduate Grades | Under-graduate Grades | Grade Points | Numerical Scale of Marks |
|---|---|---|---|---|
| A | A | A | 4.0 | 85 - 100 % |
| A- | A- | A- | 3.7 | 80 - 84 % |
| B+ | B+ | B+ | 3.3 | 75 - 79 % |
| B | B | B | 3.0 | 70 - 74 % |
| B- | B- | B- | 2.7 | 65 - 69 % |
| C+ | | C+ | 2.3 | 60 - 64 % |
| | | C | 2.0 | 55 - 59 % |
| | | D | 1.0 | 50 - 54 % |
| F (0-59%) | F (0-64%) | F (0-49%) | 0.0 | |

Medicine (January 1970 to date):
S = Satisfactory U = Unsatisfactory

Prior to September 2002, numerical grades as well as letter grades were recorded for some courses.

'D' is a passing grade, but is not sufficient if the course is a pre-requisite for other courses or is required by the student's program.

Information about grading policies in effect prior to 1980 (Law prior to 1985, Dentistry prior to 1987) is available at www.mcgill.ca/students/records/transcripts.

### Grade Point Average (GPA)
All credits attempted are used in the calculation of the Grade Point Average, including courses with a grade of 'D' or failed courses that are repeated or for which supplemental examinations are taken.

### Other Grades
CR ..... Credit granted based on equivalent qualifications
EX ..... Exemption
FN ..... Failure, may not write a supplemental examination
HH ..... To be continued
IP ..... In progress
J ..... Absent
K ..... Incomplete
KE or K* ..... Further extension granted
KF ..... Incomplete - Failed
KK ..... Completion requirement waived
L ..... Deferred
LE or L* ..... Deferred - extension granted
N ..... Withdrew without approval
NA or && ..... Grade not yet available
NC ..... No evaluation
NE ..... No evaluation
NR ..... No grade reported by the instructor (recorded by the Registrar)
P ..... Pass
Q ..... Course continues in following term
R ..... Course credit
S ..... Satisfactory
U ..... Unsatisfactory
W ..... Withdrew
WF ..... Withdrew - failing
WL ..... Faculty Permission to withdraw from a deferred examination
W-- or -- ..... No grade: student withdrew from the University

### Administrative Statuses
(applicable to the Academic Integrity Tutorial)
CO ..... Completed
IC ..... Incomplete

### Remarks
A ..... included in the GPA calculation but not credits
E ..... excluded from the GPA and credit calculation
I ..... included in the GPA and credit calculation
EXC ..... excluded from the GPA and credit calculation, normally at the time of a change in the student's degree program

### Remarks – Prior to September 2002
G ..... credit not normally allowed but permitted in this case
H ..... pass at undergraduate level
Ø ..... completion from earlier year
R ..... course repeated to meet program time limit
T ..... credit by exam only
U ..... extra
V ..... course for non McGill DCS
X ..... extra
Y ..... not for credit, not calculated in the GPA
Z ..... course for McGill DCS

### Class Average
Where appropriate, a class average expressed as the letter grade most representative of the class performance, appears in the class average column.

### Credits
Since September 1971, most courses have carried a credit weight. Generally, a one-term course taught for 3 hours a week carries 3 credits. The number of credits completed is shown for most programs.

Prior to Fall 2002 an asterisk (*) appears next to the credit value of courses not counted in the total credits earned.

### Non-Credit Courses
Courses offered by the School of Continuing Studies which are non-credit are assigned Continuing Education Units (CEU). One CEU represents 10 hours of participation.

### Multi-Term Courses
A multi-term course is indicated by a ◇ following the course number.

### DCS/DEC
Since 1969, Quebec high school graduates must complete a two-year college (CEGEP) program leading to a Diploma of Collegial Studies (DCS/DEC) before entering university.

### Graduation Honours – Effective September 2009
**Distinction** The notation of *Distinction* is awarded to students who have completed the required number of McGill credits for graduation and whose cumulative grade point average is in the top 25%, but below the top 10%, of their Faculty's graduating class.

**Dean's Honour List** A graduand identified as being on the *Dean's Honour List* must have earned a cumulative grade point average within the top 10% of their Faculty's graduating class.

## NOTATION – depuis septembre 1980

| Médecine dentaire (depuis1987) | Notes de 2e/3e cycle | Notes de 1er cycle | Notes pondérées | Échelle numérique des notes |
|---|---|---|---|---|
| A | A | A | 4.0 | 85 - 100 % |
| A- | A- | A- | 3.7 | 80 - 84 % |
| B+ | B+ | B+ | 3.3 | 75 - 79 % |
| B | B | B | 3.0 | 70 - 74 % |
| B- | B- | B- | 2.7 | 65 - 69 % |
| C+ | | C+ | 2.3 | 60 - 64 % |
| | | C | 2.0 | 55 - 59 % |
| | | D | 1.0 | 50 - 54 % |
| F (0-59%) | F (0-64%) | F (0-49%) | 0.0 | |

Médecine (janvier 1970 à aujourd'hui) :
S = satisfaisant U = insatisfaisant

Avant septembre 2002, les notes numériques et les notes graphiques étaient indiquées pour certains cours.

« D » est une note de passage, mais qui ne suffit pas si le cours est exigible pour d'autres cours ou si le cours est obligatoire dans le cas du programme de l'étudiant.

On trouvera des données sur les politiques de notation en vigueur avant 1980 (pour le droit, avant 1985 et la médecine dentaire, avant 1987) à l'adresse http://www.mcgill.ca/students/records/fr/transcripts/key.

### Moyenne pondérée (MP)
Toutes les unités visées servent au calcul de la moyenne pondérée, y compris les cours auxquels l'étudiant obtient un « D » ou les cours auxquels l'étudiant a échoué et qu'il redouble ou pour lesquels il subit un examen de reprise.

### Autres notes
CR ..... Unité accordée en fonction de qualifications équivalentes
EX ..... Dispense
FN ..... Échec, sans droit de passer un examen de reprise
HH ..... À suivre
IP ..... En cours
J ..... Absent
K ..... Incomplet
KE ou K* ..... Autre prolongation consentie
KF ..... Incomplet - échec
KK ..... Dispense d'achèvement
L ..... Reporté
LE ou L* ..... Reporté - prolongation accordée
N ..... Abandon sans autorisation
NA ou && ..... Note pas encore disponible
NC ..... Sans évaluation
NE ..... Sans évaluation
NR ..... Aucune note déclarée par le chargé de cours (consignée par le registraire)
P ..... Réussite
Q ..... Cours poursuivi au trimestre suivant
R ..... Unité de cours
S ..... Satisfaisant
U ..... Insatisfaisant
W ..... Abandoné
WF ..... Abandoné - échec
WL ..... Autorisation de la faculté de ne pas subir un examen reporté
W-- ou -- ..... Pas de note : l'étudiant a quitté l'Université

### Statuts administratifs
(applicables au tutoriel d'intégrité académique)
CO ..... Terminé
IC ..... Incomplet

### Remarques
A ..... inclus dans le calcul de la MP, mais sans unités
E ..... exclu de la MP et du calcul des unités
I ..... inclus dans la MP et le calcul des unités
EXC ..... exclu de la MP et du calcul des unités, normalement au moment d'un changement dans le programme de l'étudiant sanctionné par un grade

### Remarques – avant septembre 2002
G ..... Unité normalement interdite, mais autorisée dans ce cas
H ..... Réussite au niveau du 1er cycle
Ø ..... Terminé au préalable
R ..... Cours redoublé pour respecter l'échéance du programme
T ..... Unité accordée sur examen seulement
U ..... Extra
V ..... Cours valant pour un DEC hors McGill
X ..... Extra
Y ..... Sans unité, non calculé dans la MP
Z ..... Cours valant pour le DEC de McGill

### Moyenne de la classe
Lorsqu'il y a lieu, la moyenne de la classe, exprimée comme la note alphabétique la plus représentative des résultats de la classe, figure dans la colonne de la moyenne de la classe.

### Unités
Depuis septembre 1971, la plupart des cours ont un coefficient exprimé en unités. En général, un cours d'un trimestre enseigné trois heures par semaine vaut 3 unités. Le nombre d'unités obtenues est indiqué pour la plupart des programmes.

Avant l'automne 2002, un astérisque (*) figure en regard du coefficient d'unités des cours qui ne sont pas comptabilisés dans le total des unités obtenues.

### Cours sans unités
Les cours dispensés par l'École d'éducation permanente pour lesquels l'étudiant n'a pas reçu d'unités donnent droit à des unités d'éducation permanente (UEC). Une UEC représente 10 heures de participation à un cours.

### Cours échelonnés sur plusieurs trimestres
Un cours échelonné sur plusieurs trimestres est indiqué par un ◇ suivi du numéro du cours.

### DCS/DEC
Depuis 1969, les diplômés des écoles secondaires du Québec doivent suivre un programme collégial de deux ans sanctionné par un diplôme d'études collégiales (DEC/DCS) avant d'être admis à l'Université.

### Mentions d'honneur pour les diplômés – depuis septembre 2009
**Distinction** La mention de *Distinction* sera attribuée aux étudiants qui ont réussi le nombre exigé d'unités de McGill en vue de l'obtention du diplôme et qui se classent parmi les meilleurs 25 % (mais sous le seuil des 10 %) de l'effectif de dernière année dans chaque faculté, selon leur moyenne pondérée cumulative.

**Tableau d'honneur du doyen** Un étudiant en passe d'obtenir son diplôme et sélectionné en vue du *Tableau d'honneur du doyen* devra être du nombre des étudiants de dernière année dans chaque faculté se classant parmi les meilleurs 10 %, selon leur moyenne pondérée cumulative.

## PERSONAL STATEMENT

My goal is to build a research career connecting climate science with data-driven methods to understand environmental change and support adaptation. My education in Ghana and Canada has given me a foundation in atmospheric science and experience investigating how climate conditions affect communities. I now seek doctoral training to develop stronger skills in Earth-system modelling, machine learning and the interpretation of complex environmental data.

I graduated with First-Class Honours in Meteorology and Climate Science from Kwame Nkrumah University of Science and Technology. My undergraduate research examined how temperature affects the lifespan and vectorial capacity of malaria vectors across Ghana's agro-ecological zones. This work helped me recognise that the significance of climate variability depends not only on changes in physical conditions, but also on their consequences for people.

The beginning of my MSc in Atmospheric and Oceanic Sciences at McGill University was disrupted by a significant visa delay. Classes began on August 31, 2022, but I could not arrive in Canada until October 22 and joined classes in November after completing the necessary paperwork. While in Ghana, I studied independently as in-person instruction and assessments proceeded, with limited access to online course materials. I missed substantial instruction and most midterm assessments, while uncertainty about my visa and funding added to the difficulty. After arriving, I had to catch up on coursework and assignments that depended on class activities I had missed. These disruptions affected my first-year grades and my preparation for some subsequent courses.

I provide this context because my MSc coursework GPA of 3.38/4.0 does not capture the full scope of my graduate training. It reflects 21 graded coursework credits, while thesis and research credits were assessed on a Pass/Fail basis. Despite the difficult start, I completed the degree and developed substantial experience in independent climate research.

My MSc research investigated historical and projected sea-ice conditions along the Nunatsiavut coast using climate-model simulations, reanalysis and Canadian Ice Service observations. I also developed and validated a degree-day model for sea-ice onset and melt timing. This work strengthened my Python skills, model-evaluation practices and ability to interpret differences between observations and simulations. It also deepened my motivation to connect climate analysis with locally meaningful conditions and risks.

During my MSc, I secured a paid research assistant position at Environment and Climate Change Canada (ECCC) and received funding for round-trip travel to attend a seven-day conference at the International Centre for Theoretical Physics (ICTP). These opportunities provided further research experience and exposure to an international scientific community. Alongside the successful completion of my thesis, they provide additional evidence of my research potential beyond my coursework GPA.

Since completing my MSc, my work evaluating AI systems on scientific tasks has further encouraged me to pursue machine learning for environmental research. This experience complements my atmospheric-science training, while advanced machine-learning development remains an area in which I seek further training. Your Lab's integration of climate, Earth-system modelling and AI offers a compelling setting for that development, particularly through research on urban climate and interactions between environmental change, human activity and infrastructure.

My teaching experience at KNUST and McGill has shaped my long-term goal of becoming a university faculty member. I hope to conduct climate and environmental-data research, teach scientific computing and mentor students. I would bring persistence, quantitative research experience and a willingness to learn across disciplines to doctoral study.

Examples of my research background, projects and scientific interests are available through my research portfolio: **https://kyeimiahlab.com**.
